Quiz 11.1: Interpretation

Name: ________________________________

1. Is the following statement a “statistical interpretation” or a “story interpretation”?

   Children who watch more than 4 hour of television per week have 2.6 times the odds of obesity than children who do not watch television.

   □ Statistical interpretation
   □ Story interpretation

2. Should the following statement be included in the results or discussion section of a paper?

   Children who spend more hours watching television were more likely to be obese which is consistent with other findings from Kenya, India, and Brazil.

   □ Results
   □ Discussion

3. What is NOT covered in the discussion section of a paper?

   □ How your results compare to findings in other studies
   □ Hypotheses about why your results were different from other published research
   □ Policy and program recommendations based on findings
   □ Findings summarized with odds ratios and p-values
