Quiz 2.2: Stata tips

Name: ________________________________

1. There are a number of ways to comment out code so that Stata does not run it as a command. Which of the follow is NOT correct?
   - #
   - *
   - //
   - /* text text */

2. If you want to learn more about the `svy` command, what would you type in the Stata command line to get more information?
   - `svy`
   - `learn more svy`
   - `help svy`
   - `svy command`

3. You look up the `tabulate` command via the Stata help window, and you see the first three letters of the command underlined like this: `tabulate`. What does this mean?
   - You only need to type the first 3 letters of any command in Stata to run that command
   - You only need to type the underlined letters of any command in Stata to run that command
   - That `tabulate` is an analysis command
   - That `tabulate` is a data management command
4. There are shorthand ways to write the same code. Which two lines of code are NOT equivalent?

☐ keep b1 b2 b3 b4 b5 b6 b7
☐ keep b*

☐ drop b1 b2 b3 b4 b5 b6 b7
☐ drop b1–b7

☐ keep b1 b2 b3 b4 b5 b6 b7
☐ keep b1##
